

A worked example, straight from the simulator

One driver's week — Car #21 (plays by the rules)

Why: the whole site's charging shifts earlier

REAL SIMULATION RESULT (seed 1541 — 25% capacity, one week)

Everyone follows the plan: Driver ✓ Operator ✓ Grid ✓ → DAY PASSES

1 in 5 grab out of turn: Driver ✓ Operator ✗ Grid ✗ → DAY FAILS — and Car #21, which followed the rules, still lost 43% of its charge
